

UAS 4000 Counting Scale System

The UAS4000 Counting Scale System package is a fully programmable counting scale system. Designed in conjunction with a 30 year veteran counting scale company, the UAS4000 far exceeds any counting scale system on the market today and implements all the functions that clients have been looking for in their counting scales but were up until now unable to acquire. The UAS4000 is the answer to your label compliance and data collection needs

Part Number Database Storage
Bar Code Label Printing
Customizable Fields
Multiple Label Formats
Accumulating
Serializing
Up to 4 Scale inputs
PC Interface
Setpoint Relay Control
Ethernet Communications
Bar Code Scanner Integration
Standard PC Keyboard Integration

Case Studies

Client: Highland, ITW
Locations: CT
Units in Operation: 4

Notes:
Highland has 4 UAS4000 systems networked back to both an AS400 and an SQL server. Scales currently print any of 15 label formats and control a parts feeding hopper. Because of the scales autolearn technology, the scale quickly adjusts to product flow rate and auto fills boxes to target. The UAS4000 has greatly reduced their pack time. The SQL and AS400 data is used to track inventory, create time studies and more.

Client: Carling Technologies
Locations: TX, CT, China, Mexico
Units in Operation: 10 expandig to 30

Notes:
Carling Tech one of the worlds leading manufacturers of switches and circuit breakers currently has 10 UAS4000 Counting Scale systems networked across the globe eliminating the need for onsite setup and training. The UAS4000 easily allows real time data collection to their business system. Systems are updated and modified remotely from Connecticut HQ. The UAS4000 has inexpensively replaced the need for high cost data collection terminals that were previously in use.
